Introduction

Adds two pages of information showing real-time bandwidth use. When used as a (part of a) startup script one or more small packages are downloaded into WRT's /tmp.

This is a great bandwidth logging app that runs on the WRT54G. The latest version will backup to ftp or jffs and will restore automatically after a reboot etc. Very good for people with limited bandwidth per billing period.

Prerequisites

You should already have:
-a Linksys WRT54G product
-DD-WRT installed as the firmware

Installation

short version (cut'n paste from <http://www.hetos.de>):

```
cd /tmp
```

```
wget http://wrt54g.hetos.de/wrtbwlog.tgz
```

```
tar -xzf wrtbwlog.tgz
```

```
rm wrtbwlog.tgz
```

```
cd bwlog
```

```
./start.sh
```

open browser to:

```
http://ip-from-your-router:8000
```

See the links below for more details.
