

You are here: [DD-WRT wiki mainpage](#) / [Scripting](#) / [SSH/Telnet & The CLI](#) / [ip command](#)

This is an infant page. Clean it up and fill it with content!

Contents

- [1 Basic Usage](#)
- [2 OBJECTs](#)
- [3 OPTIONS](#)
 - ◆ [3.1 family](#)

Basic Usage

As always, things in [] are optional and | means or

```
ip [ OPTIONS ] OBJECT { COMMAND | help }
```

Ex: To get help on the *link* object, one would enter

```
ip link help
```

OBJECTs

Objects can be any of the following. (A short description of each should be added)

```
link  
kkl  
route  
rule  
neigh  
tunnel  
maddr  
mroute  
monitor
```

OPTIONS

Options can either be the short or long version

Ex: *ip -V* is the same as *ip -Version*

```
-V[ersion]  
-s[tatistics]
```

OPTIONS

lp_command

```
-r[esolve]  
-n[num tables] |  
-f[amily]  
-o[neline]
```

family

Family itself can take additional options:

```
inet  
inet6  
ipx  
dnet  
link
```
