Testing Area

put all new stuff here. needful things will be sorted in the wiki structure from time to time

[LaFonera Software Easy Flashing](#) a test page for editing a wiki about the FON2200

some very important values

maximum performance

- TX Power maximum = 18 (chipset maximum value - you can check using iwlist ath0 txpower)
- Antenna Gain = 0

questions / answers / news

May i know if there are any progress with La Fonera **Plus**? Thanks [rhkl](#)

Are the GPIO pins that are brought out on SW1 used for other purposes, or can we do with them as we please? [Daemondust](#)

2007-03-16

How to setup fonera to be a normal AP (= extend wired LAN over WIFI, no NAT, no DHCP provided by fonera (should be possible to get IP from DHCP on wired lan when connected to AP))?

Done, see [LaFonera Software AP-mode Cipis](#)

contact to developers or beta-tester

the forum

You can either go to the dd-wrt forums and post your request there

- [german forum](#)]
- [english forum](#)

by web-based communication

or you can contact any of the people who like to help someone which are listed here:
