

Only trying to make it look better, help/corrections/suggestions appreciated. --Alex 05:18, 29 Jul 2006 (CEST)

www.yi.org

Can someone tell me how to make this work for yi.org?

<http://www.yi.org/help/tech/protocols.shtml>

The URL is :

<http://www.yi.org/bin/dyndns.fcgi>

which has no parameters (though you can put them there if you want) and you use the hostname as http basic auth.
