

Talk:FON_Hotspot

Hi

I have just flashed my FON WRT54GL v1.1 with the dd-wrt v24 pre SP2 standard-nokaid (build 12533) firmware and i follow the tutorial but i have a pb with JFFS! It seems not been created! It is told in the tutorial that i should see a number different from 0 after cleaning JFFS, i don't! Need your help! Thanks Please have a look to my screenshoot <http://sd-1.archive-host.com/membres/images/28791406954572199/nokaidstatus.jpg>

Hi,

While waiting for an answer, i followed the wiki "Without JFFS" and it works! I have 2 SSIDS and I log ton my Fon SSID. I get the FON Homepage. After a few minutes, my old WRT54GL was "on" on the fon website, "my fon" tab! It has been "off" for 2 years! I have just one more question about the heartbeat Why do i have a /tmp/sh is empty
