Hmmmm, just upgraded to v23 voip, and don't see the xlink kai option any more. Perhaps this is why we need to reset to factory defaults? I never do it because I can't figure out what the point in it is, and hey I've been doing it that way for years.

it isnt included in the voip version. use the std version

Does this Kaid work with WRT54GS v3??

Every ting else is fine but I Dont see any settings for the Kaid exepth the Enable/Disable and console macs.

Why do I always get the "Network May Be Unreachable" before Starting games?

I have the standard firmware and followed the instructions... I can see the games, but not enter them.
