

Talk:Linksys_WRT300N_v1,_v1.1

I have just purchased a WRT300N and I wanted to upgrade the firmware to enable Wake On LAN. I followed the instructions for installing dd-wrt.v24_wrt300n.bin but the firmware upgrade fails saying it is not designed for my router. Can anyone help?

only v1 is supported

dd-wrt does just support the WRT300N v1, but not the v2 models which are using a totally different chipset.

the case of the v1 is blue, where the v2 case is silver
