

## QoS and WRT as a transparent Bridge.

I have the WRT configured as a transparent bridge connecting to a Dlink 604T. I am guessing that Qos doesn't work if routing is switched off.

### Added caveat for speed settings

Added a *caveat* to the capping section after a topic on the forum, warning people not to mistakenly swap their up- and downspeeds (an error that seems to happen often enough). I even made that error myself, so I think this can save many people some trouble. --[132.229.165.58](#) 12:13, 21 Mar 2006 (CET) (ro-maniak on the forum) [friend](#)
