

Merge suggestion into support? Seems kind of out of place at the moment--[Tempnegro](#) 08:18, 30 Sep 2006 (CEST)

Its out of place because this section and all sections marked with the underconstruction template are apart of the new skin/ structure revamping that I am working on. Please leave it like it is and don't change or edit it until the banner is removed, thanks. -- [Interex](#) 18:59, 30 Sep 2006 (CEST)

Trying to use WRT54G v2 as a bridge repeater to expand range of a new Linksys E3000. I Downloaded dd-wrt.v24 mini\_generic.bin and uploaded (flashed) to WRT54G without any problems. I followed the step by step instructions several times and I still cannot get an internet connection from the WRT54G. I can communicate with both devices and security settings are not a problem. I read through other posts and made sure again and again that the WRT54G (repeater) had the proper "Gateway" code 192.168.1.1 to match the E3000. Still no internet connection. Do I need to download a different firmware version? I welcome any help and offer my thanks in advance. E Pruitt

## SNMP on Linksys WRT54Gv8 / GSv7

I have read the posting on using SNMP. But the builds I have tested don't include SNMP. What build can I use to get the SNMP service? I am currently using dd-wrt.v24\_micro\_generic.bin. Here is the directory listing from where I think I need to be on the FTP site. I just don't want to brick my unit.

```
ftp> pwd
Remote directory: /stable/dd-wrt.v24 SP1/Consumer/Broadcom Generic/micro
ftp> ls
229 Entering Extended Passive Mode (|||12466|)
150 Here comes the directory listing.

## HELP ME PLEASE WITH WRT54GS V7!!!

I'M VIETNAMESE, SO MY ENGLISH VERY BAD! A HAVE A ROUTER LINKSYS WRT54GS ( I USED 2 YEARS SO GOOD). YESTERDAY I UPGRADED TO DD WRT "v24 preSP2 " WITH "vxworkskillerGSv7-v3.bin" FILE. AFTER UNGRADED AND AUTO RESET. IT'S HAS A PROBLEM!! LED POWER IS BLUR AND I CAN NOT CONNECT WITH MY ROUTER AS BEFORE UPGRADE. :( HELP ME PLZ! To day! i had FLASH ok. :D tks all

CAN ANYONE HELP ME PLEASE..

Talk:W8901G

THE HTTP ON MY ROUTER SI DISABVLE SO I CANNOT ACESS THE WEB INTERFACE.. HOW DO I REENABLE IT USING SSH PLEASE HELP ME

HELP ME PLEASE WITH WRT54GS V7!!!
