

Does DD-WRT v23 SP2 (09/15/06) mini - build 3932 breaks wiviz ?

It does so for me! [togo](#) 23:27, 4 Oct 2006 (CEST)

What hardware version are you having Wiviz problems with?

I have a WRT54G version 3 ... Meanwhile I found that
In -s /jffs/www/wiviz/ /tmp/www/wiviz
makes it possible to see the page, HOWEVER Wiviz does not seem able to connect to the [w](#)
interface that gives it data! This interface seems to be accomplished by means of a Wi-Viz
daemon that is being woken and called by the wiviz-get.sh CGI which is called by the
wiviz.js invoked by the loaded wiviz.html page...

I can currently not see any evidence of the demon (which is probably usr/sbin/wiviz) runs while the wiviz
page is open! However executing usr/sbin/wiviz manually works and deliver usefull output to the console.

I suspect something is wrong in the www/cgi-bin/wiviz-get.sh shell script which says:

```
#!/bin/sh
WIVIZ_PATH=/jffs/usr/sbin/wiviz
echo Content-type: text/html
echo
killall -USR1 wiviz >/dev/null 2>
```
