

reminder: create linux? command category and seperate this bitch--[whiteboy](#) 06:47, 31 Oct 2006 (CET)

Wl ambiguous

we seem to have two pages with the same stuff in it -- this page and the [wl](#) page.

//===== Currently we have three similar pages of wl

[WL](#)

[Wl](#)

[Wl_command](#)

The page titles first character is not case sensitive. I think we should drop the page Wl, merge WL to Wl_command. Then give redirect for WL and Wl to Wl_command. Any suggestions? [Skygunner](#)

It has now been resolved. --[Glenn](#) 11:46, 14 May 2010 (CEST)
